

ENGINEERING NOTES

The domestic hot water supply has been designed as a single pipe system. No return pipes shall be fitted. All hot water service pipes shall be fitted with the energy efficient, self regulating heating cables, Raychem HWAT R, as manufactured by Chemelex to maintain an adjustable temperature in the range 50-65C.

Termination of the self-regulating heating cables shall be with insulation displacement type connectors and gel type end seals, RAYCLIC, as manufactured by Chemelex.

The circuits shall be controlled via an energy saving, programmable controller, HWAT ECO, as manufactured by Chemelex, to provide adjustable temperatures in the range 50-65C.

The HWAT circuit shall be controlled and monitored via the multi circuit control panel, Raychem SBS-XX-HV-ECO-10, by Chemelex, integrated with circuit protection.

The HWAT cables shall be installed 'straight traced', insulated, tested and commissioned strictly in accordance with the HWAT design guide and preferably by a specialist installer named by Chemelex.

The cables shall be installed to within 1000 mm of each outlet or blending valve, or as close to the draw-off point as is reasonably practicable.

Insulation selection and thickness shall be in strict accordance with the HWAT design guide.
