

RaySol Sales Guide

The **Raychem RaySol system** is the smart, safe, and efficient heat trace alternative to traditional heated air and glycol-based recirculation systems. RaySol systems consist of an electronic controller, self-regulating electric heating cables and an easy-to-install set of connection kits to provide commercial freezer facilities with reliable and economic frost heave protection. The RaySol system is backed by an industry leading 10-year warranty.

GOALS

Educate designers, engineers and contractors on the design and installation of RaySol system solutions.

Educate contractors on planning, installing and commissioning successful RaySol systems. Assist in developing a better understanding of the differences between installing RaySol and alternative systems.

AUDIENCE

Engineering firms, contractors and commercial cold storage building managers looking for a smart, energy-efficient and reliable heat trace solution for frost heave prevention.

WHERE USED

RaySol systems are ideal for new construction and major retrofits of a wide variety of commercial cold storage facilities.

WHY RAYSOL?

1 COMPLETE SYSTEM

RaySol systems minimize energy consumption. Related components allow for fast installation and reliable connections. Our smart controllers manage the entire system to maximize performance, reliability, energy efficiency and improve customer satisfaction.

2 ENGINEERING & DESIGN SUPPORT

RaySol systems are easy to design and install. For more complex designs, our experts can help optimize projects for budget and energy efficiency.

3 SAFETY BENEFITS

RaySol systems are tested to the most stringent industry standards and certified by major Approval agencies. We offer a high reliability 10-Year Extended Product Warranty that covers cables, and associated components and accessories.

4 ENVIRONMENTALLY RESPONSIBLE

RaySol systems save energy and can potentially use renewable electricity sources. With RaySol, you can avoid the potential environmental risks associated with glycol-based circulation systems.
